

Open Courseware Lecture Video System

Editable 1920 x 1080 scene templates and production rules

SCENE A - SLIDE COMPOSITE

SCENE B - FULL CAMERA

Scene A - Slide composite

The source SVG contains named layers for background, live-source masks, metadata, footer, CTA, and hidden safe-area guides.

ROLE

Use when the lecture slide is the primary evidence and the professor remains visible as a supporting presence.

EXACT GEOMETRY

Canvas	1920 x 1080
Slide feed	x40 y100 - 1380 x 776
Slide corner radius	12 px
Right rail	x1448 to x1880 - 432 px
Speaker feed	x1448 y100 - 432 x 576
Footer	x0 y972 - 1920 x 108
Footer rule	3 px - #C41230

IMPLEMENTATION

- Map the slide source and speaker source into the named SVG clip groups.
- Keep the course code subordinate to the lecture title.
- CTA remains quiet: Continue Learning / Subscribe for new lectures.

Scene B - Full landscape camera

The watermark is deliberately small and placed inside the 40 px action-safe margin. Reposition only when framing consistently conflicts.

RECOMMENDATION

Keep this state almost completely clean. The room and the professor's movement are the content; a rail or persistent footer would compete with them.

PERSISTENT ELEMENTS

Camera feed	Full bleed - 1920 x 1080
Watermark	x1510 y40 - 330 x 59
Watermark treatment	White - 60% alpha
Footer	None
Right rail	None
Persistent CTA	None

USE THIS STATE FOR

- Walking, room-scale gestures, board work, demonstrations, and audience questions.
- Moments when physical delivery matters more than the current slide.
- A clean visual reset after dense slides or code.

Optional lower third and switching logic

OPTIONAL LOWER THIRD

- Show for 4 to 6 seconds on the professor's first full-camera appearance.
- Include professor name, course number and name, and lecture title.
- Do not leave it on screen while the professor is moving through the same area.
- Use a short fade or 8-frame lateral move; no bounce or decorative motion.

DEFAULT SWITCHING RULE

EDITING DEFAULT

Hard cut on a phrase boundary.
Use a 4 to 6 frame dissolve
only to soften a visible
framing or exposure jump.

Keep audio continuous across both states. Do not retain a slide picture-in-picture in Scene B unless a specific lesson requires it.

Handoff checklist and brand guardrails

EDITABLE DELIVERABLES

scene-a-slide-composite.svg	Slide-led composite with named live-source masks and metadata layers
scene-b-full-camera.svg	Full-bleed camera scene with subtle 60% unitmark watermark
optional-lower-third-overlay.svg	Transparent 1920 x 1080 lower-third overlay
assets/	White unitmark placement proxies at 100% and 60% alpha

BRAND GUARDRAILS

- Replace the supplied raster placement proxy with the official CMU School of Computer Science vector unitmark before final mastering.
- Do not re-typeset, crop, distort, recolor, or rebuild the unitmark. Preserve its full proportions and required clear space.
- Use Carnegie Red #C41230 as the single accent. Core neutrals: #0F0F10, white, and CMU gray values.
- Use Open Sans for metadata and interface copy. Keep the official lettering inside the supplied unitmark artwork.

PRODUCTION CHECKS

- Confirm every live source is cropped, not stretched, inside its named mask.
- Check rail text against the longest expected lecture title before batch rendering.
- Keep the watermark on Scene B only; the footer already brands Scene A.
- Reserve the strongest subscribe prompt for the end card; the Scene A footer remains a secondary reminder.
- Master at 1920 x 1080 and inherit the source camera frame rate.

CORE COLORS

Carnegie Red
#C41230

Near black
#0F0F10

Iron Gray
#6D6E71

Steel Gray
#E0E0E0
